The state of the world is in constant flux. Each day brings new political, economic, and environmental changes, and the issues facing our customers and societies as a whole grow ever more diverse and complex. The field of business and people’s lifestyles are also seeing dramatic shifts as the impact of IoT (the Internet of things) and computerization continue to gain momentum.

Anticipating these changes, in May 2016 Hitachi moved to become an Innovation Partner for the IoT Era with its new 2018 Mid-term Management Plan. In this plan, we focus our efforts in four business domains—power and energy; industry, distribution, and water; urban; and finance, public, and healthcare. We have launched a market-driven business structure comprising three layers: the “front” businesses that interface directly with customers as they develop and provide services; the “platform” that enables quick, efficient provision of those services; and the globally competitive “products” we bring to market.

In line with our Corporate Credo—contributing to society through the development of superior, original technology and products—we engage in the Social Innovation Business on a global basis, putting our IT and control and operational technologies to use in the advanced social infrastructure systems we provide to create a future where people can live safer, richer lives. Moving forward, we will take our Social Innovation Business to a more advanced phase with enhanced digital technologies to accelerate “collaborative creation,” tackling shared issues and crafting solutions together with our customers and partners.

It is precisely because this is an era of great change that Hitachi is dedicating itself to working smarter and faster, creating new value for customers and enhancing people’s quality of life. In this way we will pursue growth as a company and sustainable development for society as a whole.

Toshiaki Higashihara
President & CEO
A New Business Plan to Make Hitachi an Innovation Partner for the IoT Era

Hitachi’s Strengths
Delivering innovations to customers and society through fusion of OT, IT, and products/systems

Accomplishing the Social Innovation Business
The front delivers Hitachi’s technologies and expertise to customers as services

Our Challenges
Building the Future Through Collaborative Creation with Customers

Under the 2018 Mid-term Management Plan, Hitachi will accelerate collaborative creation with customers and partners through the advanced Social Innovation Business, with a focus on the trend toward digitalization that is significantly changing society and industry. Leveraging three strengths—operational technology, IT, and products/systems—we deliver innovations to society and customers.

2018 Mid-term Management Plan Targets

Fiscal 2015 Results

- Consolidated revenue: 10,034.3 billion yen
- Adjusted operating income ratio: 6.3%
- EBIT ratio: 5.3%
- Net income attributable to Hitachi, Ltd. stockholders: 172.1 billion yen

Fiscal 2018 Targets

- Consolidated revenue: 10,000.0 billion yen
- Adjusted operating income ratio: Over 8%
- EBIT ratio: Over 8%
- Net income attributable to Hitachi, Ltd. stockholders: Over 400.0 billion yen

* Foreign exchange rate assumption: 110 yen/dollar, 120 yen/euro.

*1 OT: Operational Technology.
Interest is rising in railway infrastructure as a way to deal with the social issues that accompany global warming and increasing urbanization. Hitachi is now expanding its global railway system business using the considerable technological expertise it has developed over many years.

Meeting the Railway Systems Needs of Today’s Society

There is now great interest in the role that railway systems can play in dealing with the various social issues caused by global warming and population growth. As the economies of developing nations rapidly grow, their populations concentrate in cities, causing serious problems like traffic congestion and air pollution and increasing the need for environmentally friendly railway transport. Meanwhile, existing transport infrastructure in developed nations has deteriorated and is in urgent need of renovation to meet current requirements.

Previously, Hitachi focused mainly on manufacturing rolling stock and electrical products, but in recent years it has expanded its business to provide a comprehensive range of services for running railways, such as operation management systems and maintenance services.

The European Rail Industry Association, UNIFE has estimated that the global railway-related market will grow from 13.2 trillion yen (2014–16) to 14.6 trillion yen (2017–19). We anticipate significant growth for the railway operations segment of our business. In 2015 Hitachi acquired two Italian companies—Ansaldo Breda, a rolling stock manufacturer, and Ansaldo STS, a transportation system technology company—thereby enhancing its signaling and railway operation businesses, as well as its turnkey solutions, with an expanded product portfolio.

A Global Company with Comprehensive Offerings

With the acquisition of the two Italian companies, Hitachi has become one of only a few players in the global railway industry that offers a full lineup including rolling stock and systems. As well as various achievements in the global market to date, most famously demonstrated by the Shinkansen bullet train, Hitachi has an industry-leading track record for safety in operation management systems and in rolling stock. Hitachi has placed particular emphasis on environmental considerations, reducing noise pollution and making increasing use of recycled materials, and is a market leader in bimodal and hybrid systems that switch between electric and diesel operation. Hitachi is also developing technology for using big data to improve the efficiency and safety of railway logistics. Hitachi is using these strengths to focus not just on specific services—like rolling stock systems, signaling, and traffic management—but also a full range of turnkey railway-system solutions including transport systems and Operations and Maintenance (O&M).

In fiscal 2014, O&M accounted for 1% of railway-related revenue, but Hitachi’s aim is to increase O&M and turnkey combined to 24% of the 640 billion yen in revenue targeted for fiscal 2018.

Meeting Needs in the Birthplace of Railway

Much of the United Kingdom’s railway infrastructure dates back to the nineteenth century. This infrastructure is now deteriorating and in urgent need of modernization. Meanwhile, the British Department for Transport is currently implementing the Intercity Express Programme (IEP), which will replace aged rolling stock on main lines.

In October 2004, Hitachi was chosen as preferred bidder, and in the following year received the order for 29 Class 395 trains, with a total of 174 carriages, to run on the 109-km high-speed link between London and the Channel Tunnel. The first trains entered service in 2009. The successful completion of this project around half a year ahead of schedule was a huge boost to Hitachi’s business in the United Kingdom. In 2007, Hitachi established the Ashford Plant, which received 16,000 job applications in 2015, far more than the number of jobs available. To date, the plant has hired 550 people, selecting them according to Hitachi founding concepts of harmony, sincerity, and pioneering spirit and prioritizing values over technical skills.

Hitachi’s Pioneering Spirit at Work in the United Kingdom

As part of the IEP, Hitachi received an order for 122 trains and 866 cars, of which 110 trains will be produced at the Newton Aycliffe plant. The 43,000 m² plant has a production capacity of 40 cars a month and, as the company’s European manufacturing operation, plays an important role in the global strategy of Hitachi’s railway system business.

At the new plant Hitachi places special emphasis on two things in particular: dedication to the spirit of craftsmanship and the training of staff with solid technical skills. There has been much interest in the region regarding the local recruitment of staff. The plant received 16,000 job applications in 2015, far more than the number of jobs available. To date, the plant has hired 550 people, selecting them according to Hitachi founding concepts of harmony, sincerity, and pioneering spirit and prioritizing values over technical skills.

In order to manufacture rolling stock in the United Kingdom with the same assurance of quality as in Japan, and to make that process easily comprehensible to U.K. staff, Hitachi is systematizing procedures and the technical skills of experienced employees in Japan and recording those skills in use. Additional measures to transfer skills to U.K. employees include sending plant staff to Japan for training at Hitachi’s Kasado Works and dispatching Japanese workers from the Kasado Works to the Newton Aycliffe plant to share their knowledge there.

In Britain, where aging railway infrastructure is in serious need of modernization, Hitachi is enjoying growing business. The company’s train car manufacturing is being hailed as a way to reinvigorate railway-related industry in the birthplace of modern rail.

Creating Value for Society Through Railways

Hitachi’s Newton Aycliffe plant, where the new Class 800 trains are being manufactured for the Intercity Express Programme.

Our Value Creation

Creating Value

Railway Business in the United Kingdom

Hitachi is enjoying growing business. The company’s train car manufacturing is being hailed as a way to reinvigorate railway-related industry in the birthplace of modern rail.
Hitachi’s artificial intelligence technology, Hitachi AI Technology/H, is generating new economic growth with versatility that makes it applicable to diverse industries even in a rapidly changing, unpredictable age.

**AI for Continuing Economic Growth**

Recent years have seen an increase and diversification of data types and formats, thanks to the rapid spread of cloud computing, mobile devices, and social media, along with the development of new sensor technologies to capture this data.

In previous analyses conducted by human specialists, it was becoming increasingly difficult to test hypotheses through exhaustive sifting of this vast amount of data. As these data-driven results became more inaccessible, it gave rise to social problems, such as a digital divide that was directly linked to an income divide.

In response to these changes, Hitachi developed technology to use and apply this “big data,” and in 2012 launched a full-scale big data analysis service. We have relationships with a wide range of customers in the electric power, manufacturing, retail, finance, transportation, and water industries, and are making efforts to link infrastructure and products using the Internet of things (IoT) and other means. In 2016, we began providing the Lumada IoT platform, developed as a core for social innovation. One of its basic functions is Hitachi AI Technology/H, or simply “H” hereafter.

Now that Hitachi’s H has been put to practical use in various industrial fields, we are building on our findings to improve the future, based on past data, and successfully deriving methods to deal with unknown problems.

For example, when the goal of “increasing sales” is input into H, it analyzes enormous quantities of past data and “thinks” on its own to derive the best method to achieve this. Since it can be added to existing systems, installation costs are also kept down. It is still humans, however, that define the goal for H and implement the measures it recommends. Hitachi H is a system in which humans and AI learn together through data to raise productivity.

**Hitachi AI Helping People Work Together**

The major characteristic of H is its versatility. Most new technology has a history of being invented first for a specific purpose, later spreading throughout more of industry and society as it is generalized. At Hitachi, our prediction that AI will certainly reach an age of generalization has led us to pursue a more versatile AI implementation from the very beginning.

H has three further characteristics.

1. Human users define and input the outcome to be achieved.
2. There is no need to define a specific method to solve the problem or application in question.
3. H can be applied to existing systems.

High levels of happiness, and that groups with high levels of organizational happiness have high productivity. In other words, employees’ happiness is closely related to their organization’s activity and should be considered to strongly affect productivity. Hitachi has quantified this as a unique index: “organizational activation.” In June 2016, we kicked off a demonstration experiment using H to offer advice to 600 sales and marketing division employees in the Hitachi Group in order to effectively increase happiness. The aim is to raise productivity by providing the organization with fresh energy tied to increased individual happiness.

With AI, Hitachi pursues optimization of overall systems, including the humans that operate them, and is accelerating its Social Innovation Business.

**Versatile Hitachi AI Technology/H can respond to a wide range of work content, and is already producing results in many different industrial sectors.**

**Application Examples of Hitachi AI Technology/H**

Just one AI software package has enabled versatile improvement in fields from retail, logistics, and industrial plants to finance, transportation, and manufacturing.
Contributing to the Resolution of Social Issues Through the Social Innovation Business
The development of Hitachi’s operations has been supported by value creation based on our Corporate Credo of contributing to society through the development of superior, original technology and products. Building on this tradition, we are contributing to the resolution of social issues through our Social Innovation Business, which combines advanced IT with infrastructure technologies developed over many years.

We value collaborative creation with our stakeholders, giving importance to dialogue, as a corporate citizen.

Our Sustainability
Hitachi’s Initiatives in Building a Sustainable Society

Conducting Socially Responsible Business Operations by Respecting Human Rights and Caring About the Environment
Social expectations of the business sector are rising as companies globalize their operations and become multinational entities. Hitachi is actively promoting CSR with an accurate awareness of the social impact of its business activities and its social responsibilities as a corporate citizen.

We create an environment where thought is given in daily operations to human rights and employee health and safety not just within the Group but throughout the supply chain. To contribute to the resolution of environmental issues like climate change and resource depletion, moreover, we are working to reduce the environmental burden of our products throughout their life cycle. As a company with global operations, we are fulfilling our responsibilities to society from a broad perspective, such as by attaching importance to international rules and standards and strengthening governance to create a corporate culture with high transparency and ethical standards.

Hitachi’s Main CSR Activities

Achieving Hitachi’s Environmental Vision Through the Social Innovation Business
As global warming, resource depletion, ecosystem destruction, and other environmental issues grow more serious, the international community is working together to tackle these problems, such as by adopting the Paris Agreement that includes a target to keep global warming to below 2°C. From an environmental-management perspective, Hitachi, which promotes the Social Innovation Business, has established the Environmental Vision and defined the kind of society we envision in the long term in contributing to the resolution of global environmental issues.

Long-Term Environmental Targets: Hitachi Environmental Innovation 2050
Our Environmental Vision envisions a low-carbon society; a resource efficient society; a harmonized society with nature. To achieve such a sustainable society, we have newly established a set of long-term environmental targets called Hitachi Environmental Innovation 2050.

To create a low-carbon society, we aim to achieve 80% reductions in CO2 emissions by fiscal 2030 across the value chain in line with ambitious targets set in the Paris Agreement. Toward that end, we will enhance the efficiency of our products and services, supply low-carbon energy, and develop innovative technologies and solutions.

To achieve a resource efficient society, we will do our utmost through our business operations, together with our customers and society, to help build a society that uses water and other resources efficiently. We will also improve our usage efficiency of water and other resources in our business operations by 50% by fiscal 2050.

To achieve a harmonized society with nature, we will strive to minimize Hitachi’s impact on natural capital, which bestows the benefits of nature on humankind.
Diversity as a Driver of Innovation

Human resources are key to Hitachi’s ability to adapt to rapid social and environmental change and continue providing new value to customers. The values that human beings hold are increasingly diverse, requiring the company itself to reflect that diversity in order to continue creating new value for them.

Hitachi respects the differences among people, such as their gender, nationality, career history, age, sexual orientation, and values, that make them unique individuals. To ensure that this individuality is put to use in ways conducive to both the individual’s and the company’s sustainable growth, we promote a policy of diversity with the strong commitment of top management. Our aim is to promote diversity as part of our management strategy and become a company that makes full use of our diverse human capital.

Throughout the Hitachi Group we promote HR management practices that maximize the strength we can draw from a diverse, highly engaged workforce transcending national and corporate boundaries. With strong teamwork and broad experience in the global market, we work to meet the various needs of our stakeholders.

Developing Frontline Staff to Advance the Social Innovation Business Worldwide

Hitachi recognizes the need to strengthen its people at the “front,” who interface with customers, in order to advance its Social Innovation Business and accelerate its collaborative creation with those customers. These frontline staff members, who develop and provide solutions to customers in their capacity as salespeople, system engineers, or consultants, numbered 110,000 in fiscal 2015, a figure we plan to expand to 130,000 by fiscal 2018. In particular, to foster the leaders who can champion our Social Innovation Business around the world, we make use of globally shared leadership development programs. Here the focus is on giving young workers opportunities to gain valuable experience overseas. There are more than 80 programs in all, including those letting Hitachi employees work together with local people to resolve the issues affecting their societies. In this way, we are promoting training to give our people the skills and knowledge they need to provide true innovation to our customers.

Deepening Diversity Management

Activities in Japan

Teaching Information Ethics

Hitachi, Ltd. provides lessons on information ethics aimed at junior high school students. This program makes them better understand various social issues and develops their ability to find out solutions by themselves.

Activities in North America

“The Hour of Code”

As a part of next generation education activities, Hitachi Data Systems Corporation runs “The Hour of Code” seminars that use company strengths to provide computer science training to children under 15 years old.

Activities in Europe

Providing Nest Boxes for Birds

Clarion Hungry Electronics Kft. set up a total of 45 nest boxes made from recycled materials inside the company premises and 11 other areas, including nearby kindergartens and elementary schools.

Activities in Asia

The Hitachi Young Leaders Initiative

Since 1996 Hitachi, Ltd. and Hitachi Asia Ltd. have been running the Hitachi Young Leaders Initiative to provide four university students each from Japan and seven ASEAN countries with an opportunity to discuss and propose possible solutions to social issues in Asia through activities such as forums, group-activity, and field work.

Greening the Deserts of Inner Mongolia

Since 2004, Hitachi Construction Machinery (Shanghai) Co., Ltd. started the Horqin Desert Greening Project creating the “Hitachi Construction Machinery Forest.” In the first 10 years the project planted trees in a 100,000 m² area. In the second 10 years from 2014, the project plans to plant a 130,000 m² area.

Contributing to Society as a Good Global Corporate Citizen

Since 2011 Hitachi Group companies have conducted visiting classes to engage children with hands-on science experiments and projects that draw on the skills and know-how of our long innovation tradition.
Our Business

Key Business Segments for Social Contributions

Information & Telecommunication Systems
Hitachi provides IT services that address customers’ diverse needs by combining Hitachi’s extensive expertise in a diverse range of business fields, including financial services, with advanced information technology. Our services cover the entire life cycle of systems, ranging from consulting to system integration, operation, maintenance, and other support.

- Main Products and Services
  - Systems Integration, Consulting, Cloud Services, Services, Storage, Software, Telecommunications & Networks, ATM
- Principal Consolidated Subsidiaries (as of March 31, 2016)

Social Infrastructure & Industrial Systems
Hitachi provides infrastructure products and services that form the underpinning of people’s daily lives and their communities, such as rolling stock and train management systems, power plants and transmission/distribution systems, elevators and escalators, and water treatment systems. In addition, it offers industrial equipment and energy-saving solutions that help reduce the environmental impact on our society. Hitachi leverages technological capabilities and products developed over many years to maximize the efficiency and reliability. Business operations are focused on industrial equipment and plants in the Asia region, railway systems in the United Kingdom, and elevators in China.

- Main Products and Services
- Principal Consolidated Subsidiaries (as of March 31, 2016)

Electronic Systems & Equipment
Drawing upon the Hitachi Group’s advanced technologies, Hitachi provides systems that support the information society, including semiconductor manufacturing equipment, electronic component processing equipment, and broadcasting and wireless communications systems. Hitachi also produces medical and inspection systems that improve health as well as power tools. We conduct business operations in regions including North America, Europe, and Asia.

- Main Products and Services
  - Semiconductor Manufacturing Equipment, Test and Measurement Equipment, Advanced Industrial Products, Medical Electronics Equipment, Power Tools
- Principal Consolidated Subsidiaries (as of March 31, 2016)
  - Hitach High-Technologies Corporation, Hitachi Koki Co., Ltd., Hitachi Kokusai Electric Inc., Hitachi Medical Corporation*1

MRI scanners shipped: 7,050

As a global corporate citizen, Hitachi engages in business worldwide in social infrastructure and many other fields, thereby creating both economic and social value in order to contribute to a sustainable society.

Locations of our business operations: Over 100 countries and regions

- A storage system

Overseas sales ratio: 69%

- Hitachi Construction Machinery’s ultralarge hydraulic excavator and dump truck for use in mining.

Social Contributions

Construction Machinery
Hitachi provides integrated solutions globally, ranging from the sale of hydraulic excavators and other construction machinery to services and maintenance. Leveraging decades of expertise with these technologies and know-how, Hitachi offers solutions that address the needs of a broad range of industries, including civil engineering and construction, building and structural demolition, and mining.

- Main Products and Services
  - Heavy Construction, Mining Machinery
- Principal Consolidated Subsidiaries (as of March 31, 2016)
  - Hitachi Construction Machinery Co., Ltd.

High Functional Materials & Components
Hitachi draws upon its wealth of technologies and expertise to provide various materials and products that support advanced functions, as well as a host of diverse products in fields ranging from IT to consumer electronics and automobiles. These materials and products include semiconductor and display materials, advanced performance materials, synthetic resin products, specialty steels, magnetic materials, casting components, and wires and cables. We conduct business operations in regions including Asia, North America, and Europe.

- Main Products and Services
  - Semiconductors and Display Related Materials, Circuit Boards and Materials, Automotive Parts (Rigid/Plastics, etc.), Energy Storage Devices, Specialty Steels, Magnetic Materials and Components, Casting Components, Wires and Cables
- Principal Consolidated Subsidiaries (as of March 31, 2016)
  - Hitachi Chemical Company, Ltd., Hitachi Metals, Ltd.

Automotive Systems
Hitachi is working on mobility technology innovations for electronic and motorized automotive parts in the areas of the environment, safety, and information to contribute to the creation of safe and comfortable automobiles with ultra-low fuel consumption. We are conducting business operations globally.

- Main Products and Services
  - Engine Management Systems, Electric Powertrain Systems, Drive Control Systems, Car Information Systems
- Principal Consolidated Subsidiaries (as of March 31, 2016)

Ratio of automotive electronics products: 47%

- Hitachi Automotive Systems’ Stereo Camera.

- Hitachi Automotive Systems’ Stress Camera.

*1 The trade name of Hitachi Medical Corporation was changed to Hitachi Healthcare Manufacturing, Ltd. as of April 1, 2016.
Corporate Profile

Smart Life & Ecofriendly Systems
Hitachi delivers new values and lifestyle innovations to society and people all over the world by providing home appliances, lighting and housing equipment, and refrigerating and air-conditioning solutions. Hitachi also helps reduce the environmental impact on our society through the development of more energy-efficient products. We conduct business operations in regions including China, Asia, and the Middle East.

Grand Prize winners: 3 kinds of products for 3 consecutive years

Main Products and Services
Home Appliances, Lighting and Housing Equipment, Refrigerating and Air-Conditioning Products

Principal Consolidated Subsidiaries (as of March 31, 2016)
Hitachi Appliances, Inc., Hitachi Consumer Marketing, Inc., Hitachi Consumer Products (Thailand), Ltd.

Others (Logistics and Other Services)
Hitachi is active in the logistics sector, including system logistics, transport and installation of heavy products and precision machinery, and international air and sea freight transportation, as well as the manufacture and sales of information storage medium and batteries, and real estate. We conduct business operations in regions including North America, Europe, and Asia.

Eco-car ownership rate: 90%

Main Products and Services
Logistics, Optical Disk Drives, Property Management

Principal Consolidated Subsidiaries (as of March 31, 2016)

1) Hitachi Transport System, Ltd. became an equity-method affiliate of Hitachi with the transfer of some of the shares held by Hitachi in that company.
2) Hitachi America, Ltd., Hitachi Asia Ltd., Hitachi (China) Ltd., Hitachi Europe Ltd., and Hitachi India Pvt. Ltd. are the Hitachi Group’s regional headquarters for the Americas, Asia, China, Europe, and India, respectively, and they sell the Hitachi Group’s products.

Financial Services
We offer solutions integrating diverse functions including leasing, loans, rentals, credit cards, and securitization as well as payment and collection agency services, insurance services, trust services, and outsourcing. We provide these solutions to customers in five key areas: Japan, Europe, the Americas, China, and ASEAN.

Power generated in renewable projects: 200% growth

Main Products and Services
Leasing, Loan Guarantees

Principal Consolidated Subsidiaries (as of March 31, 2016)
Hitachi Capital Corporation

1) Hitachi Capital Corporation will become an equity-method affiliate of Hitachi in October 2016.

14
Our Technological History

Contributing to Society with Hitachi Technologies

1910 | Company formed. Completed 5-horsepower induction motor
1916 | Completed a 10,000-horsepower (7,355-kW) water turbine—the largest in Japan at the time—for delivery to a power plant
1924 | Completed Japan’s first large-scale DC electric locomotive
1931 | Completed 6,000-kW rotary converter
1942 | Completed HU-2, Japan’s first commercial electron microscope
1949 | Completed first U05 power excavator
1957 | Completed digital parametron-based computer, HIPAC Mk-1
1959 | Completed HITAC301, a transistor-based digital computer
1961 | Developed fully automatic washing machine
1968 | Developed an ultra-high-speed hybrid LSI
1969 | Completed online banking system
1970 | Developed computer-aided traffic control system for the Shinkansen (bullet train)
1974 | Completed Japan’s first 470,000-kW nuclear power station
1975 | Completed large M-series computer system
1976 | Succeeded in world’s first optical transmission system field test
1978 | Completed world’s first field emission electron microscope with record-breaking high resolution
1981 | Completed S-810, the first supercomputer produced in Japan
1983 | Developed a 0.3-mm square contactless IC chip, the world’s smallest
1984 | Started mass production of 256-kbit DRAMs
1985 | Developed CAD/CAE system with ultra-high resolution color display
1988 | Developed quadrupedal robot
1993 | Developed Shinkansen (bullet train) with maximum service speed of 270 km/h
1995 | Developed Super TFT LCD module featuring ultra-wide viewing angles
1997 | Developed the DNA sequencer
2000 | Developed a 52.5-Qbit/in² perpendicular magnetic recording method
2002 | Developed high-speed, highly accurate, compact finger vein authentication technology
2003 | Developed EMIEW 2, a small and lightweight interactive robot
2007 | Developed highly efficient rare-metal-less compact motor technology
2008 | Developed highly efficient rare-metal-less compact motor technology
2009 | Built a prototype 3-kV-class SiC diode
2010 | Developed rare-metal recycling technology
2011 | Approval granted for domestic production of a proton beam therapy (PBT) system using spot scanning
2015 | Developed Hitachi AI Technology/H and launched solutions business using advanced AI technologies
