Hitachi
in the UK

Welcome to Hitachi in the UK...

A Foreword by Andrew Barr, President of Hitachi Europe Ltd.

Since Hitachi Europe HQ was established in 1981, the UK has been our European 'home'. This region has long been a key market for Hitachi's growth and today I am proud that Hitachi is a major global investor in the UK, bringing a multitude of supply chain benefits and helping to boost local economies.

Hitachi is committed to transform society as a climate change innovator - helping governments, cities and businesses across the globe cut carbon. Every day, the pivotal role we are playing in driving sustainability and working towards a net-zero future becomes clearer.

To help the UK achieve a sustainable society, we must create economic, environmental,

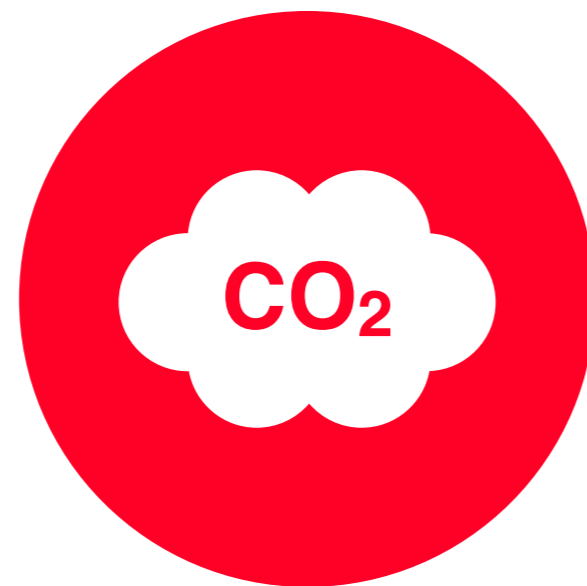

and social value through three transformation drivers – Digital, Green, and Connective. As a pioneer in the development of low carbon solutions to meet the UK's infrastructure needs, our projects are helping to diversify the UK's energy mix; we are helping to solve some of the UK's biggest transportation challenges; and our investment in digital technology is digitally transforming some of the UK's leading companies.

Much of the critical work we do is hidden below the surface. However, through this document we hope to bring some of this to life, showcasing some of the great projects we've delivered and demonstrating how Hitachi is adding value to the UK and its people.

Our UK Presence

We are a global investor in the UK, bringing a multitude of supply chain benefits and helping to boost local economies.

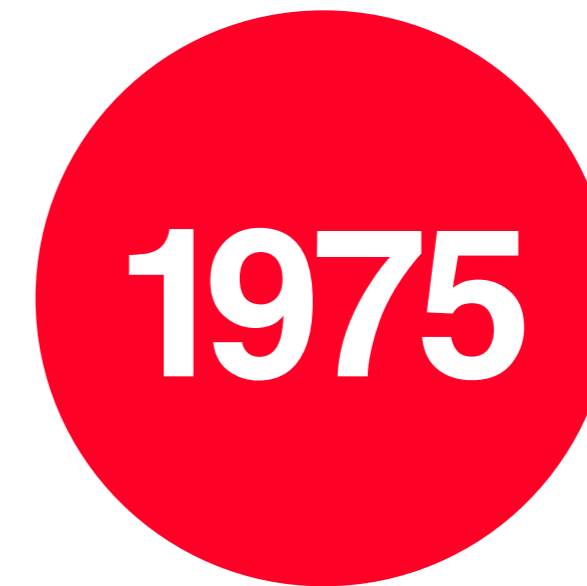

Hitachi is a climate change innovator, helping governments, cities and businesses cut carbon. We are committed to helping achieve a sustainable future.

Hitachi contributes to communities across the UK with more than 30 operations in England, Scotland and Wales.

We have 6,000 Hitachi employees across the UK.

The UK has been a focus country for the development of Hitachi's global business for nearly fifty years, manufacturing since 1975.

Hitachi is working to connect solutions within Energy and Mobility, both physically and digitally, to deliver net-zero.
