JP1
One Simplicity
Case Study

EPSON SINGAPORE PTE LTD
Hitachi JP1 solutions enhance desktop management, boost software governance and compliance, improve end-user and IT productivity

Hitachi clearly had users in mind when it designed JP1. The core is solid but the interface is very intuitive.

A wholly owned subsidiary of the Seiko Epson Corporation, Japan, Epson Singapore Pte. Ltd. was established in 1980 as Epson Electronics (Singapore) Pte Ltd to sell and market Epson Corporation, Japan, Epson Singapore Pte. Ltd. A wholly owned subsidiary of the Seiko Epson Corporation, Japan, Epson Singapore Pte. Ltd. was established in 1980 as Epson Electronics (Singapore) Pte Ltd to sell and market Epson imaging and printing products in South East Asia. Today, its offices host the regional headquarters for ASEAN and South Asia; and the product portfolio has expanded to include personal and business printers, scanners, LCD projectors, Point-of-Sale (POS) systems, and electronic component devices.

Epson Singapore has a ‘customers first’ policy and this is reflected in its achievement of ISO 9001 and ISO 14001 certification in November 1997 and March 2000, respectively. While the company is known for providing its customers with products of excellent quality that create true value for them, in 2007, it found itself needing to make improvements in how desktop IT assets were managed. That year, external auditors had highlighted the need for greater control over software assets. A separate audit exercise by internal auditors made the same observation that software control needed to be tightened.

At that time, the proper use of equipment and software governance were pooled using point-in-time ‘snapshots’ of individual machines by members of the IT team, said See Tho Wai Loon, Department Head, Information System Support Department. Besides requiring substantial IT manpower-hours, this approach was difficult to apply, especially considering that more than 90% of end-users use portable computers that are easily taken out of the physical corporate environment.

“Updates and patches were performed PC by PC, with the end-user interrupting from one to two hours each time. Given that we’re primarily a sales organisation and that users are physically distributed, it was difficult to schedule time slots convenient for both the worker and IT staff members tasked with keeping client software current.”

Hitachi JP1 - A Wise Choice

Clearly, Epson Singapore’s desktop environment needed to be made more manageable that it was and a decision was made in early 2009 to implement a solution that could address its challenges. With the capability to address the auditors’ concerns at the top of its wish list, the Information System Support Department set out looking for a solution that could meet its requirements. It shortlisted two products, got the vendors to conduct proof-of-concept (POC) demos, and eventually selected two components of the Hitachi Job Management Partner 1 suite of systems management solutions: Hitachi JP1/Software Distribution (Hitachi JP1/SD) and Hitachi JP1/Asset Information Manager (Hitachi JP1/AM). The selected Hitachi JP1 primarily for its ease of use. Navigation is very user friendly, making the software easy to learn and use without much training. Hitachi clearly had users in mind when it designed JP1. The core is solid but the interface is very intuitive,” said Mr. See Tho.

Other factors that won the deal for Hitachi included cost-effectiveness, reports that are easy to read, and IT personnel (including auditors and accountants) to interpret. High degree of automation, and the ability to allow Epson Singapore to manage by exception.

“Implementation was fast-free, with no hiccup. Buy-in from the country IT team was very strong and we managed to loop in all the countries in a single session. It helped that the Hitachi consultant who worked with us on the implementation was very experienced.”

Hitachi clearly had users in mind when it designed JP1. The core is solid but the interface is very intuitive.

Hitachi clearly had users in mind when it designed JP1. The core is solid but the interface is very intuitive.

One of the requirements of the organization’s auditors was that a compatibility report be produced whenever users switched functions. This made it difficult for the Information System Support Department to locate the software when end-users requested help with their applications.

“A wise decision was made to use Hitachi JP1 specifically for its ease of use. Navigation is very user-friendly, making the software easy to learn and use without much training,” said Mr. See Tho.

Hitachi JP1 solutions enhance desktop management, boost software governance and compliance, improve end-user and IT product support.

Part of the SEIKO Epson Group, Epson Singapore is a leader in digital imaging. Using Hitachi JP1/Software Distribution and Hitachi JP1/Asset Information Manager and Hitachi JP1/Software Distribution, the company has achieved an up-to-date, highly manageable and visible desktop environment, improved software governance and enhanced end-user support.

Epson Singapore has a ‘customers first’ policy and this is reflected in its attainment of ISO 9001 and ISO 14001 certification in November 1997 and March 2000, respectively. While the company is known for providing its customers with products of excellent quality that create true value for them, in 2007, it found itself needing to make improvements in how desktop IT assets were managed.

Hitachi JP1 is a Clear Choice

Clearly, Epson Singapore’s desktop environment needed to be made more manageable that it was and a decision was made in early 2007 to implement a solution that could address its challenges. With the capability to address the auditors’ concerns at the top of its wish list, the Information System Support Department set out looking for a solution that could meet its requirements. It shortlisted two products, got the vendors to conduct proof-of-concept (POC) demos, and eventually selected two components of the Hitachi JP Job Manager Partner 1 suite of systems management solutions: Hitachi JP1/Software Distribution (Hitachi JP1/SD) and Hitachi JP1/Asset Information Manager (Hitachi JP1/AM).

We selected Hitachi JP1 primarily for its ease of use. Navigation is very user-friendly, making the software easy to learn and use without much training. Hitachi clearly had users in mind when it designed JP1. The core is solid but the interface is very intuitive,” said Mr. See Tho.

Other factors that won the deal for Hitachi included cost-effectiveness, reports that are easy for non-IT personnel (including auditors and accountants) to interpret, high degree of automation, and the ability to allow Epson Singapore to manage by exception.

Implementation was fast-track, with no hiccup. Buy-in from the country IT team was very strong and we managed to loop in all the countries in a single session. It helped that the Hitachi consultant who worked with us on the implementation was very experienced.”

Broad Range of Benefits

With the two Hitachi JP1 solutions in place, updates and patches are now pushed out to users as they become available and stocktaking of client assets is done when the user logs into the corporate network at start-of-workday. Both these processes are transparent to users, who no longer need to have their work interrupted and are now more aware of the need to keep the desktops uncompromised. As for the company’s auditors they were, in the first quarter of 2010, “pleasantly surprised” by the new ability to track both software and hardware assets.

The high degree of automation inherent in the Hitachi JP1 solutions has also reduced the burden on the IT team, which has also been trimmed. The time being saved is now invested in new projects that deliver more value than performing manual software updates and troubleshooting at the user’s desk. In addition, each team member now is a wider set of skills, including soft ones.

Other form of usage that was subsequently deployed was using JP1 to launch the Epson Singapore Screener. The Screener platform is uniform deploy news and updates and events to all desktops.

Subsequent roadmap is to utilize JP1 for portable storage devices in tightening the security environment for information exchanges between users and external parties.

“Force Multiplier”

“Overall, we see Hitachi JP1 as a force multiplier. For example, our managing director was using Internet Explorer to access Google Maps but didn’t manage to do it. It traced the problem to a missing Microsoft patch. What we did was put the patch in JP1 and pushed it out to everyone. So, in the end, every one of our users benefited from the resolution of what was initially just one person’s problem,” said Mr. See Tho.

Clearly satisfied with its Hitachi JP1 solutions – and with ROI projections on track – Epson Singapore will be recommending them to its sister companies in the Epson stable. It will also be taking a closer look at how other Hitachi JP1 solutions, in particular, Automatic Job Management System and Performance Manager, can help it enhance its application and server management operations.
