Management
Hitachi’s Social Innovation

At Hitachi, we work with our customers towards creating a sustainable society by utilizing data and technology, and focus on Social Innovation Business that supports people’s quality of life. After experiencing the management crisis in the wake of the Lehman Shock, Hitachi focused on Social Innovation Business as our single purpose, to solve social issues together with our customers through unique technologies that combine our strengths in IT, OT, and Products; and we have since continued to reform our business portfolio to become a global leader in bringing transformation to society.

Under our Mid-term Management Plan 2024, which started in 2022, we are committed to ensuring sustainable growth. To realize a sustainable society, we must expand our Social Innovation Business in various fields and create economic, environmental, and social value through three transformation drivers – Digital, Green, and Connective – that have significant impact on society and industry. For economic value, we aim to achieve growth in Earnings Per Share and Cash Flow Per Share by increasing the ratio of the Lumada® business globally, which is a customer co-creation framework of a Social Innovation Business that leverages digital technologies. For environmental value, we aim to contribute to an annual reduction of 100 million metric tons of CO₂ emissions as a Group, through cross-sector collaboration. As for social value, we will respect the planetary boundaries and aim to improve people’s well-being, with Powering Good as a guiding principle to our activities.

Creating a sustainable society through social innovation together with stakeholders

President & CEO
Hitachi, Ltd.

Keiji Kojima

*1 Lumada: Solutions, services, and technologies that leverage Hitachi’s digital technology and are offered to customers to accelerate the digitization of customers’ businesses.
As we shift into a sustainable growth mode, *Powering Good* is like a guiding principle for Hitachi, that I hold dear, and which goes hand in hand with the slogan, *Inspire the Next*. For example, I believe that the rapid evolution of generative AI will require us humans to improve our ability to discern what is good. As we constantly take actions and take on new challenges, and inspire the world through our Social Innovation Business (*Inspire the Next*) to make progress, we must never forget the ability to tell what is good, or in other words, the guiding principle of *Powering Good*.

Regarding our approach on “good,” to respect planetary boundaries, we have set ourselves a goal to achieve carbon neutrality across our value chain by fiscal year 2050, under the Hitachi Environmental Innovation 2050, a set of long-term environmental targets. We would like to bring value to our customers and society through implementing initiatives at our own business sites (factories and offices) and by significantly growing our decarbonization business that contributes to the reduction of CO₂ emissions through collaborative creation with our customers and partners.

As for well-being, we are committed to influencing and contributing towards creating a sustainable society, to ensure health and wellbeing for all and to sustain a thriving world for everyone. By making further progress in our internal and external efforts, it is our vision to support a 100 year lifespan through innovation.

**Initiatives for Human Capital Vital to Social Innovation**

Securing global human capital is a critical topic for us as we strive to realize social innovation on a global scale. Hitachi has a global network and a strong foundation for providing solutions and products to customers around the world. In recent years, we’ve had the pleasure to welcome many new talented people from ABB’s power grids business and GlobalLogic through Mergers & Acquisitions (M&A). Bringing together the capabilities of this diverse group of people with different backgrounds and expertise, and working together as One Hitachi, enables us to understand the needs and issues of our customers around the world, and to innovate to realize a sustainable society.

I believe that human capital is the source of Hitachi’s strength. In order to provide new value to customers and society as One Hitachi and to pursue transformation and growth, we have set three important goals under the Mid-term Management Plan 2024: (1) Acquisition and development of digital talent; (2) Promotion of Diversity, Equity and Inclusion (DEI); and (3) Increase employee engagement. Through our M&A, we have strengthened our digital capability by leveraging on GlobalLogic’s recruitment and development methods, while also broadening our DEI and harnessing the diverse talents. In addition, our employee engagement score has also improved. We aim to achieve even greater heights, so that our employees will have a growth mindset as One Hitachi.
Management

CEO’s Message

A Message to Stakeholders

Evolving Sustainable Management and Governance that Support Growth

In developing our Mid-term Management Plan 2024, we envisioned how the earth, society, and people living in the year 2050 would look like and our aspirations on how we want it to look like; taking a backcasting approach, we identified what we need to do today, as well as what we need to address in the medium to long term. To promote sustainable management, we identified six materiality topics and set relevant targets against each. Progress against these targets and new initiatives are discussed in the Senior Executive Committee and the Board of Directors meetings.

Evolution of governance is essential to sustainable management. The members of our Board of Directors are indispensable in bringing important issues to light and we had countless discussions in formulating the Mid-term Management Plan 2024. We will develop our sustainable management further, through continuous discussions with our Board members under the sustainable growth mode.

Also, in order to improve corporate value through more robust sustainability management, we amended the executive compensation system in April 2023, and introduced new evaluation criteria on sustainability based on our materiality. To grow sustainably as a company, we must be recognized as a sustainable company. It is important that we keep our eyes on the future and contribute to society over the medium to long term and give back to our stakeholders. The amendment reflects our strong desire to share this intention at the management level. By implementing such mechanism, we aim to further advance our sustainable management.

Hitachi’s more than 110-year history is a series of solving social issues, built together with customers and stakeholders. As a company that promotes Social Innovation Business, Hitachi values dialogue and collaboration with a diverse range of stakeholders, including customers, shareholders/investors, governments, municipalities, academia, and research institutions. We receive a great deal of input from young people who will lead the next generation in particular, as they are highly environmentally and health-conscious. These stakeholders are also innovation partners for Hitachi with whom we work together to solve social issues.

Nowadays, many of our customers are taking on the challenge of solving social issues. Therefore, I feel like we are in an environment where we can truly engage in Social Innovation Business, and it is very encouraging to see the birth of new Social Innovation Businesses as we work diligently together with our customers to solve social issues.

To meet our stakeholders’ expectations, Hitachi will continue to grow and deliver innovation to our customers around the world and society, with our diverse team full of talent working together across business domains and areas of responsibility, with a One Hitachi mindset.

Hitachi Sustainability Report 2023
Management
Chief Sustainability Officer’s Message  GRI 2-22

Making solid progress toward our fiscal 2024 sustainability targets

My Mission

The Hitachi Group is a multinational enterprise with a global network of operations, an extraordinarily wide range of products, and a century of know-how and capabilities spanning many different industries. As Chief Sustainability Officer, my overarching mission is to leverage and align these strengths in ways that enable the Group to effectively tackle the big issues confronting the world today.

I am responsible for assessing the Group’s impact on the environment and society and making decisions on appropriate actions to take, to make sure to meet the needs of the present without compromising the ability of future generations to meet their own needs. However, to successfully implement these actions, the Group will need to transform on a deep, structural level. Therefore, part of my job is to firmly integrate sustainability into our business models, operations, and decision-making. People are the critical element of this transformation, of course, so leadership and engagement are vital to encourage all members of the Group to be part of this journey.

Sustainability is Opportunity for Hitachi

Sustainability is not a new concept for Hitachi—it is rooted in the Company’s corporate philosophy and identity. Sustainability is also a central element of our Mid-term Management Plan 2024, which focuses on sustainable growth while respecting planetary boundaries and enhancing people’s wellbeing. The key to the realization of the plan is our Social Innovation Business and to offer practical solutions for environmental and societal issues that impact the sustainability of our planet.

Today, customers increasingly want to work with companies that are committed to sustainability rather than purely financial performance. Investors, too, are using environmental, social and corporate governance (ESG) criteria when choosing where to put their money. Young people especially, prefer to work for companies that have a broader purpose. We see these trends as opportunities for Hitachi to attract customers, investors and talent, and to contribute to sustainable economic growth in every country where we operate.

Lorena Dellagiovanna

Senior Vice President and Executive Officer,
Chief Sustainability Officer,
General Manager of Sustainability Group, and CDEIO
Hitachi, Ltd.
**CEO's Message**

**Hitachi Group Identity**

**Sustainability Management**

**Engagement and Initiatives**

**External Assessments and Awards**

---

**Progress of Materiality and Sustainability**

To demonstrate Hitachi’s strong commitment to sustainability with transparency, we worked closely with various stakeholders, NGOs, and other external organizations and identified six issues that are critical for the Group’s future—namely: the environment; resilience; safety and security; quality of life; business with integrity; and diversity, equity and inclusion (DEI).

In this process, we examined current and programmed business opportunities and assessed impacts for stakeholders.

Thanks to the dedicated efforts of the Group’s employees around the world, we have been making steady progress toward achieving the targets. On our decarbonization efforts, for example, we are aiming to achieve carbon neutrality within our business sites by fiscal 2030. Our target for the current Mid-term Management Plan is to reduce this by 50% against the base year of 2010 by fiscal 2024, and our current projection shows that we are expecting to reach 64% of CO₂ emissions reductions. On the other hand, we are also working with our customers to reduce the society’s CO₂ emissions through Social Innovation Business. In fiscal 2022, we were able to contribute to approximately 126 million metric tons of avoided emissions against our target of 100 million metric tons.

On circular economy, we are on track to achieve our target of reduction rate in waste use per unit by 24%, by fiscal 2024 compared with the base year 2010. As part of our efforts to promote a circular economy, we’re also aiming to virtually eliminate waste sent to landfill by fiscal 2030 and apply eco-design to all newly developed products by fiscal 2024. Hitachi registered 357 new products using this approach in fiscal 2022, which will significantly reduce the environmental impact throughout the product life cycle.

Turning to human capital, we set ourselves the target of increasing our digital talent to 97,000 people group-wide by fiscal 2024 (excluding Hitachi Astemo), recognizing that digital capabilities are not only important to the Hitachi Group but for society in general. Thanks to Hitachi’s acquisition of GlobalLogic, a leading digital engineering services company, we have been able to grow and will continue to strengthen our digital capabilities.

DEI is also at the core of our sustainability strategy, and we will drive our efforts to strengthen sustainability management going forward. For example, we have been strengthening diversity in our senior management layer and this is indicated by the percentages of female and non-Japanese executive and corporate officers. In fiscal 2022, women and non-Japanese nationals appointed to these positions reached 11% and 20% respectively, making headway toward our targets of 30% by fiscal 2030.

More importantly, however, we have been making diversity an integral part of our workplace by giving every member an active role to play. Reflecting this approach, our employee engagement score in fiscal 2022 surpassed the target we set for fiscal 2024. Diversity can generate new ideas, but for people to have a platform for voicing those ideas and creating solutions, measures must also be in place to ensure equity and inclusion. In other words, the interplay between all three components of DEI is the key to unlocking innovation and the potential of human capital.

As a group-wide voluntary initiative, our Hitachi Voice of Youth Programme provides opportunities for young employees to talk about sustainability with peers across different businesses, regions, and with our leadership team. I have had numerous conversations with the participants, and I am very excited about how these young people are bringing new energy and passion to the Group from the bottom up.

I believe that Hitachi will have a greater opportunity to rapidly evolve by leveraging its collective capabilities, know-how, technologies, and diversity in ways that provide valuable solutions for people throughout society. By having all our businesses around the world join forces as One Hitachi, every member of the Group can play an active and a vital role and make a difference.

Lastly, we regard external evaluations as important feedback for strengthening sustainability management.

Hitachi has been selected for various ESG indices and was ranked as a “leader” (AA) in the MSCI ESG Ratings in 2023. MSCI gave Hitachi high marks for its sustainability initiatives, such as compliance training and disclosure of R&D investments to create green value. In addition, in 2022, Hitachi was selected as a CDP A list company (the highest rating) in the areas of Climate Change and Water Security. Moreover, Hitachi also received CDP’s Supplier Engagement Leader (the highest rating for supplier engagement) for its efforts to achieve a net-zero society, including reductions in CO₂ emissions throughout its value chain, and we are very proud of these achievements.

**Message to Stakeholders**

While the Hitachi Group is a vast global enterprise with leading-edge technologies and expertise, given the scale of the problems facing the world today, we understand the necessity for external collaboration. Therefore, we are actively seeking out opportunities to work with governments, academia, organizations, and companies, including customers, suppliers; and even our competitors. Our sustainability initiatives are directly related to 13 of the UN Sustainable Development Goals, but we intend to contribute to the achievement of all 17 goals by expanding our activities through these partnerships.

I look forward to working alongside our stakeholders as we pursue this ambitious endeavor in the years ahead.
Carrying out Corporate Activities Based on the Hitachi Group Identity

Since our founding, Hitachi has been working to solve the challenges facing society by following our MISSION: Contribute to society through the development of superior, original technology and products. Our VALUES, present in the Hitachi Founding Spirit and reflecting Harmony, Sincerity, and Pioneering Spirit, guide our mission and inspire our actions. The MISSION and VALUES are our foundation, and together with the addition of the Hitachi Group Vision of the company’s future, we define the Hitachi Group Identity.

As the Group continues to grow globally, Hitachi had reached approximately 320,000 employees on a consolidated basis in fiscal 2022, about 60% of whom working outside Japan. Similarly, sales revenue generated in non-Japanese markets account for about 60% of total revenue. In this age of working together with employees from different countries with different cultures, we must cherish Harmony, Sincerity, and Pioneering Spirit.

Hitachi businesses solve social challenges and supports sustainability. Moving forward, it is essential that all employees around the world, despite their different language and thinking, continue to engage in constructive discussion. As we pursue our goal of contributing to society, we must maintain common Hitachi VALUES across the Group.

With the Hitachi Group Identity as our foundation, we will grow as individuals and as an organization. Together with our colleagues worldwide, we will contribute to society through our Social Innovation Business.

Solidifying the Hitachi Group Identity

Hitachi offers awareness activities through training tools and courses, assuming that social issues can be solved if each employee understands and practices the Hitachi Group Identity.

One way we encourage an understanding of and familiarity with the Hitachi Group Identity and the Hitachi Brand is with the annual Inspiration of the Year Global Awards. These awards recognize remarkable activities that contribute to enhancing the value of the Hitachi Brand by building on the Hitachi Group Identity. In fiscal 2022, we received 298 applications from Hitachi Group employees around the world. These submissions included a project to interconnect renewable energy across regions and another for environmentally friendly railway vehicles that reduce local traffic congestion and air pollution. We selected projects that use technology to achieve sustainability and improve well-being in each region to compete for the Grand Prix. The Grand Prix-winning projects were recognized at the Global Awards Ceremony and shared with all employees through our intranet.

We published the Hitachi Group Identity Movie - I am Hitachi, a movie featuring the award winners, on our website, allowing a wide range of people inside and outside the Group to see how Hitachi Group employees around the world endeavor to create better societies.
Sustainability Management

Mid-term Management Plan 2024 and Sustainability

Towards Sustainable Societies—Mid-term Management Plan 2024

In accordance with Hitachi’s Mission to “contribute to society through the development of superior, original technology and products,” we pursue our Social Innovation Business leveraging core strengths in IT (Information Technology) × OT (Operational Technology) × Products, and Lumada*1 to help build sustainable societies.

To respond to the increasingly complex global issues of recent years, it is essential that we conduct management from a long-term perspective and maximize Hitachi’s diverse management resources to achieve further evolution in our Social Innovation Business.

Hitachi has responded by imagining the future—what the earth, society, and people will look like and what Hitachi will act like in 2050. Based on the future, in April 2022, we backcasted to formulate the Mid-term Management Plan 2024 which clarified what Hitachi should do now and what Hitachi should achieve over the medium- to long term.

*1 Lumada: Solutions, services, and technologies that leverage Hitachi’s digital technology and are offered to customers to accelerate the digitization of customers’ businesses.

Hitachi continues to grow across diverse industries and solve social issues through the three global trends of Digital, Green, and Connective as change drivers.

The environment is reaching limits on a global scale as the thresholds of several of the nine planetary boundaries have already been crossed. Also, wellbeing (physical, mental, and social) is a growing global issue, therefore it is significant that we focus both on planetary boundaries and wellbeing.

Hitachi aims to resolve the increasingly complex social issues through its business, while respecting planetary boundaries and realizing wellbeing for all individuals. We will further evolve our Social Innovation Business driven by three growth drivers: Digital, Green, and Innovation, and contribute to solve social issues. We will also grow Lumada globally as a customer co-creation framework, accelerating expansion through four cross-organizational functions: Green, Digital, Innovation, and Global M&S.

Introduction Management Social Innovation Environmental Social Governance Assurance Hitachi Sustainability Report 2023
Hitachi's Social Innovation Business aims to create sustainable societies by solving global social and environmental issues as defined by the SDGs, and we consider the business to be a source of sustainable growth for us. We strive to create social, environmental, and economic value through our Social Innovation Business, reduce negative social and environmental impacts and seek a deeper understanding of business risks arising from social and environmental changes to ensure business continuity and greater resilience.

Based on our Mid-term Management Plan 2024, we examined the relationship between the opportunities and risks associated with the SDGs and our businesses to identify 13 goals as Hitachi priority SDGs issues: five goals through which we make particularly significant impacts through our key businesses and six goals through which we particularly contribute in the course of our corporate activities.

Through our active involvement across a broad range of business fields, we believe we can contribute extensively to the achievement of SDGs beyond the 13 goals identified, and we will strive to contribute to the achievement of all 17 SDGs.
Materiality

Toward a Sustainable Society: Hitachi’s Materiality

Hitachi practices sustainable management, which positions sustainability as the core of its business strategy, and is working toward realizing a sustainable society through the Social Innovation Business.

In the Mid-term Management Plan 2024, we declared our aspiration of “supporting people’s quality of life with data and technology that fosters a sustainable society.” While some of the nine planetary boundaries have already been exceeded, Hitachi is aware of each one and works to protect the planet and maintain society. Hitachi aims to solve social challenges to realize a future that balances protection of the planet and people’s individual wellbeing.

Materiality analysis process

With a comprehensive understanding of social issues, Hitachi has identified six material topics and 15 sub-material topics based on an analysis of risks and opportunities from a sustainability perspective as well as feedback from stakeholders.

Based on these material topics, Hitachi is monitoring measures as well as discussing the progress, and new initiatives for each materiality at the Senior Executive Committee and the Board of Directors.

Reflecting Sustainability Targets in Executive Compensation Evaluation

In fiscal 2023, Hitachi amended the executive compensation system to further accelerate growth as a global company, and to further strengthen links between increases in corporate value and compensation. The revised executive compensation system is more closely linked to the Mid-term Management Plan 2024 and incorporates sustainability targets.

Specifically, sustainability evaluations that had been used as an index for individual short-term incentive compensation (STI) are now treated separately and account for a ratio of 20%. In addition, an additional grant of shares equivalent to 10% of the standard amount of medium- to long-term incentive compensation (LTI) will be granted if the sustainability targets are achieved.

Sustainability evaluation in STI will be aligned to materiality topics including Environment, Business with Integrity and Quality of Life.
Our aspirations

Secure cybersecurity for social infrastructure and business systems

More flexible working styles to increase engagement

Creating a safe working environment without accidents

Diverse and equitable society

Hitachi pursues sustainability initiatives across the group under the leadership of Chief Sustainability Officer, Lorena Delegiannii.

In April 2022, Hitachi established the Growth Strategy Meeting, Risk Management Meeting, and Human Resource Strategy Meeting to deliberate on the following important issues within the Senior Executive Committee that discusses important topics in Hitachi’s corporate management.

**Growth Strategy Meeting**: Matters related to management strategies for the growth of the Hitachi Group

**Risk Management Meeting**: Matters necessary for the proper management of risk in the Hitachi Group

**Human Capital Strategy Meeting**: Matters necessary for establishing organization and culture, and securing and developing human capital for the growth of the Hitachi Group

The Growth Strategy Meeting discusses and decides on matters related to the Hitachi Group’s management strategy and accelerates the formulation of strategies necessary for its growth.

The Risk Management Meeting discusses and decides on important matters related to group-wide risks, and aims to realize a solid management foundation in coordination with growth strategies through a centralized and cross-sectional understanding of risks.

The Human Resource Strategy Meeting discusses and decides on matters necessary to foster the Hitachi Group’s organization and culture as well as to secure and develop human resources, thereby supporting its further growth through the enhancement of human capital.

After discussions at these meeting bodies, important sustainability issues are deliberated on by the Senior Executive Committee to make decisions, and are submitted to the Board of Directors for further discussions as necessary.

Individual sustainability themes such as carbon neutrality, circular economy, human rights due diligence (HRDD), diversity, equity, and inclusion (DEI), occupational safety and health, supply chains, quality assurance, etc. are promoted by meeting bodies consisting of responsible staff at BUs and principal Group companies as part of cross-organizational activities in the Hitachi Group, who discuss measures and share information across the entire Group.

Since fiscal 2022, we hold the Sustainability Promotion Meetings chaired by the Chief Sustainability Officer to discuss and share information on important measures related to sustainability across the group, aiming to deepen sustainable management further.

Engagement and Initiatives

Stakeholder Engagement

In its commitment to promoting the Social Innovation Business, Hitachi endeavors to accurately identify the various social issues facing each country and region, and to work toward resolution of these issues through engagement in collaborative creation with a wide range of stakeholders, including customers, governments and municipalities, as well as academic and research institutions. In addition, with the goal of enhancing the value of our human capital, we work to promote for direct dialogues between the management and employees, who are an essential management resource. Furthermore, with the recent rise in ESG investment, we actively engage in dialogues with shareholders and investors as well.

Industry Leadership and Policy Recommendations

As part of developing Hitachi’s Social Innovation Business on a global scale, Hitachi views government institutions and private bodies in each country and region of the world as important partners. Our Government & External Relations Group leads our efforts to strengthen ties with these bodies. We collaborate with business locations worldwide to develop mutual relationships with local communities, working with governments and international organizations in each country. At the same time, the Group seeks new business opportunities for Hitachi, creating value based on the various regional social issues and policies.

More frequently, governments are asking for our opinions. We also contribute to building better societies by making requests directly and proposing solutions through discussions in economic organizations and industrial bodies.

Stakeholder Engagement

Hitachi work with diverse global initiatives and organizations to make rules that contribute to the creation of a sustainable society and to solve social issues.

Industry Leadership and Policy Recommendations

Efforts in International Standardization Activities

Hitachi considers international standardization as an activity to define the international rules necessary for achieving sustainable societies. Hitachi recognizes that international standards are standards or criteria endorsed through fair discussion and international agreement by members representing specialized fields and diverse stakeholders.

To this end, Hitachi strives to solve social issues from a global perspective. Hitachi also engages in collaborative creation with a diverse range of stakeholders, including national and regional governments, academic and research institutions, corporations, NGOs and NPOs, and users around the world to create new social norms (rules) and contribute to sustainable societies through our Social Innovation Business.

Hitachi believes international standardization is as important as R&D and intellectual property. Hitachi participates actively in standardization activities at international standardization organizations that include IEC*, ISO*, and ITU-T*. Hitachi also participates in consortia established in various regions and industrial fields around the world.

Hitachi is engaged in international standardization activities in various fields including efforts concerning the circular economy (ISO/TC138), the environmental standardization for electrical and electronic products and systems (IEC/TC 111, smart community infrastructures (ISO/TC 268/SC20), and unmanned aircraft systems (ISO/TC 20/SC 16). Providing solutions consistent with international standards through these international standardization activities, Hitachi supports the development of sound global markets and facilitate innovation to resolve social issues.

*1 IEC: International Electrotechnical Commission. An international organization composed of member countries and regions.
*2 ISO: International Organization for Standardization. An international organization composed of member countries and regions.
*4 TC: Technical Committee
*5 SC: Subcommittee

Efforts in International Standardization Activities

Main Initiatives and Groups Hitachi Is Involved with

Based on its corporate mission of "contribute to society through the development of superior, original technology and products," Hitachi promotes its Social Innovation Business with the aim of contributing to the realization of a sustainable society. As part of this, to play its proper role as a global corporation, Hitachi actively participates in international initiatives and groups addressing social issues on a global scale.

External Assessments Related to ESG

Hitachi, Ltd. earned an AA rating under the MSCI ESG Rating. Hitachi, Ltd. was selected for the A List, the highest rating given by the CDP for companies, in the two areas of climate change and water security. The company is also selected as a Supplier Engagement Leader, the highest rating for supplier engagement.

Hitachi, Ltd. has also been certified as Prime in the ESG Corporate Rating by ISS ESG.

Human Resources Awards and Recognition

Kurumin Certification
Hitachi, Ltd. received Kurumin certification from the Ministry of Health, Labour and Welfare in 2011. This certification was granted under Japan’s Act on Advancement of Measures to Support Raising Next-Generation-Children, in recognition of Hitachi’s achievement in developing and implementing action plans supporting child care, helping employees work with the peace of mind that comes from a good work-life balance. In addition to Hitachi, Ltd., several other Group companies in Japan received Kurumin certification including Hitachi High-Tech, Hitachi Systems, and Hitachi Solutions.

Eruboshi Certification
Hitachi, Ltd. pursue diversity as an important component of management strategy and strives to create work environments that enable diverse talent to play active roles. In recognition of these initiatives, we received Eruboshi certification, which is conferred to companies that implement exceptional measures under Japan’s Act on Promotion of Women’s Participation and Advancement in the Workplace. In addition to Hitachi, Ltd., several other Group companies in Japan have received Eruboshi certification, including Hitachi High-Tech, Hitachi Systems, and Hitachi Solutions.
